Pump unit

P 203

Description

The P 203 lubrication pump is versatile, compact and economical and can supply up to 150 lubrication points, depending on the line length. It consists of a housing with integrated motor, reservoir with stirring paddle, pump element with pressure-relief valve, filling nipple and electrical connection parts. This powerful pump can drive up to three pump elements and can be equipped with a low-level control (with or without control board).

Features and benefits

- Optional control printed circuit boards with different operating settings
- · Range of reservoir types offered
- For DC or AC applications
- Variety of pumping elements for different output available

Applications

- Mobile applications
- · Wheel loaders
- Excavators
- · Small- and medium-sized machinery
- · General industries
- · Combines, balers, forage harvesters

Pump unit

P 203

- A = pump prefilled partially with standard grease (NLGI 2)
- **S** = pump filled with customer specific grease
- **Z** = pump without lubricant (default for oil pumps)

- 1) high-/low-level control can not be combined with the integrated control P.C.B.
- 2) designation for pump elements for supplying of chisel paste (c=chisel)
- 3) equipment described in separate documentation
- 4) further electrical connections available on request 5) only for 110-260 V AC power supply
- 6) cable 10 m (32 ft)

⁶⁾ The stated nominal outputs per minute and pump element refer to NLGI 2 lubrication greases at an ambient temperature of + 20 °C [68 °F] and a pressure of 100 bar [1450 psi] at the outlet of the pump element. Deviating operating conditions or deviating pump configuration result in a changed motor speed of 20 rpm and thus in a change of the output per time unit.
